## WORK EXPERIENCE

### **Sr.Engineer-Environmental**

State of Delaware - New Castle, DE

#### Responsibilities

Project involved in environmental engineering permitting for industrial plants and compliance activities related to engineering in air quality issues and other health related programs. Conduct Engineering and Compliance inspection for the assigned plants and litigate any compliance issue based on inspection report as per Air Quality rules and regulations as applicable.( for 23 continuous years of service)

#### Accomplishments

I have been assigned a few multinational Fortune 500 companies for their environmental issues based on engineering practices for their locations. The companies have reduced their emission footprints of multi pollutants based on the stringent permitting requirements and rules and regulations approved by US Congress. This is a direct results of the continuous supervision with respect to applicable requirements of the permit which are incorporated in the permit as designed by me and approved by my managers. This has a direct impact of Delaware's Air Quality

#### Skills Used

- >Skills of multi engineering concepts, like Chemical/Mechanical/Civil
- >Thorough knowledge of Clean Air Act,and Delaware's Air Quality and Regulations of the Control of Air Quality
- > Manage projects within the deadlines as established by management
- > Computer skills with poer point presentation as nrrded.
