Work for a company willing to push the boundaries, and my career to the next level.

WORK EXPERIENCE

Packaging Mechanic

AstraZeneca - Newark, DE - October 2014 to Present

Responsible for multi-craft maintenance activities in assigned areas to ensure production equipment operates efficiently and in compliance with FDA requirements. Perform Preventive and Predictive Maintenance on equipment in the assigned areas including: Inspections and scheduled overhauls. Use analytical troubleshooting skills to recognize equipment problems, identify root cause, and recommend/ implement solutions that prevent problem reoccurrence. Perform mechanical and electrical equipment repairs in the assigned area including: set-up/change-over, routine adjustments and fabrication. Work with Supervisors, Operators, Engineers, and other Mechanics to identify and implement opportunities to improve equipment/ production efficiencies. Participate in cross-functional teams as assigned to support continuous improvement or equipment installation/modification. Perform and document work in compliance with SOP's, Safety Health & Environment (SHE) standards and Good Manufacturing Practices (GMP's). To include: work orders, PM's, logbooks, and permits. Respond to multiple equipment/production problems and prioritize or change assignments as needed to meet production demands.

Field Service Technician

Omega Design - Exton, PA - October 2013 to Present

Lead field serialization specialist. Lead installer on new serialization lines. Work closely with software developers on serialization and line integration. Develops and modifies machine control programs including, but not limited to, PLCs, HMIs, vision systems, robotic systems, and motion control systems. Travels to customer sites to install new machines and troubleshoot and repair existing machines. Trains customer personnel in the setup and use of Omega machines. Tests and/or inspects machines and equipment to ensure specific operational performance and optimum utilization. Sell additional services and machines to customers. Consult with engineering and production personnel relative to modification of machines and equipment in order to improve production and quality of products. Thoroughly records and documents changes to electrical, mechanical and programming changes made to serviced machines. Contributes to the continuous improvement of machine programs and designs by leveraging insights gained through field experience. Was lead in installations and training of pharmaceutical serialization projects.

Lead Carpenter

R. Jackson Construction - Brookhaven, PA - 2005 to Present

Helped grow business by hiring 3 new employees to round out the companies skill set, and grew production from \$250,000 to over \$600,000 in volume. Manage a crew of sub-contractors, keeping them on budget and making sure they are all following our standards and the plans. Run many projects simultaneously in residential, commercial, and institutional settings. Manage our employees' daily work, training them in new skills, making sure our quality is high and our output is good. Handle customers concerns and fix any problems that occur. Interact with any township officials that come on site, obtain permits when required, and communicate with architect on

how to make his plans a reality. Handle office paper work involving estimating, invoicing, and change orders. I have supervised small capital projects at Widener University for 5+ years.

Boiler Service Technician

Powerhouse Equipment - Delanco, NJ - 2003 to 2005

Serviced and maintained company's and customer's boilers. Supervised installation of mechanical systems in major universities on the east coast. Traveled to and trained customers on how to operate company's rental package or water tube boilers. On-call 24 hours a day for customer support or field emergency response. Responsibilities included burner maintenance, burner tuning, troubleshooting, and new installation of steam pipe work, copper water piping, controls, high and low voltage electric. Fixed motors, installed new pumps and motors, fixed starters, replaced fuses, aligned motor shafts, balanced fans, wire sizing, transformer installation. Completed 12 month field service training in 1.5 months.
